## Why does my bunn coffee maker leak water from the bottom

Los Angeles Times subscribers have full access to articles on the Los Angeles Times website. This includes most articles published since 1985, as well as a smaller number of older articles. Search the site directly or through search engines. You can also browse by year and month on our historical sitemap. Readers can search printed pages and article clips going back to 1881 in a database hosted by newspapers.com. Are the archives free to all? No. Articles on the website are included in a Los Angeles Times subscription. Viewing the printed pages and clips at newspapers.com requires a fee. How does newspapers.com work? Any reader can search newspapers.com by registering. There is a fee for seeing pages and other features. Papers from more than 30 days ago are available, all the way back to 1881. What if I want to see a recent printed newspaper? Do the website and print formats provide the same information? No. The text of news articles will match in both formats, but other content can be different. For example, the digital website format does not include many print features, including weather pages, sports tables, stock prices and advertising, including paid obituaries. Articles on the website that were published between 1985 and 2000 often do not include photos, maps or other content that appeared alongside them in print. After 2000, this content began to appear more often in digital versions and increasing numbers of articles, extra photos and other content were published only online. Also, the Times website does not have rights to certain freelance articles, book excerpts and opinion essays, most of these published during the 1980s and 1990s. These will only be found in the print versions at newspapers.com. What's the best way to search? You may want to try external search engines (include "latimes.com" in your search) as well as the Times site search. Search first by a phrase, keywords, dates, a snippet of text or author. Standard search techniques can help, such as putting an exact phrase in quotes. If you have the print headline and want to find the article on the website, it's best to search for a key part of the headline because the headlines may be different. What if I see more than one headline in a search? It is normal to see multiple news articles on one subject, since events unfold over time. Also, regional editions of the newspaper sometimes printed different versions of an article. In the early years of the internet it was common to publish an article on the website during the day, then separately publish an updated version the next morning on the website and in print. Searchers online may also find additional coverage in the form of digital photo galleries, blog posts, newsletters and other formats. Are there other ways to find Los Angeles Times articles and photos? Yes. Vendors such as Lexis-Nexis and Dow Jones/Factiva license archive content to display in their databases. Syndicated versions of Times articles sometimes appear on other websites. Where do I get research help? How can I buy an old newspaper, reprint an article or show a Times newspaper in a movie scene? Purchases made via our links may result in commission at no additional cost to you. I love coffee, but you know what I hate? Coffee that's gone cold in the coffee pot. I'll make a pot of coffee in the morning, pour myself a cup and off I go to face the day and all the distractions it has. Which of course means forgotten coffee... I get most of a cup down and realize that what's left in my cup is cold. Bad news. Then what's worse is that I go to make a second cup and find out my coffee machine has turned off and the pot is only lukewarm! Which brings me to this quest... What are the best coffee makers for keeping coffee hot? I did a ton of research and have found the 10 best coffee makers that will have you enjoying hot coffee all morning, cup after cup. Let's dive into the top 5. Top 5 Best Coffee Makers For Keeping Coffee Hot 1. Top Choice - Breville Precision Brewer Glass Coffee Maker Brew Style: Drip Coffee stays hot for 2 hours Brews at the perfect temperature for flavor Adjustable temperature 6 brewing settings SCA approved Price & Reviews Pros Makes great coffee 2 hour hot plate Customizable brew Makes cold brew and iced coffee Cons Water reservoir isn't removable Quite tall at 15.7 inches Let's start with what's important, the heating element on this coffee machine stays on for 2 hours, amazing. The rage I got at my first coffee machine turning off after 30 minutes was endless. Plus the coffee it makes is brewed at precisely the correct temperature for an optimal brew. But if you like it hot you can actually adjust the temperature yourself and make it hotter! How does it compare to the Cuisinart below? Well, it depends what you want the Cuisinart is cheaper and it makes a good cup of coffee. This is more expensive and it makes a great cup of coffee. So it depends on what coffee experience you're looking for, but generally speaking, this is the superior machine. There is a thermal carafe version of this coffee machine but I went for this one because the heating plate ensures a nice hot coffee for two hours. Not a slowly cooling coffee across two hours. There are a few different settings, over ice and cold brew are fun but we're here for hot coffee. You've got Fast Brew if you're in a hurry, Strong Brew if you're making a small amount. But my two favorites are the Gold Cup and the My Brew settings. The gold cup is based on the Specialty Coffee Association gold standard of coffee, in which they judge a coffee machine based on how well it makes a cup of coffee. Which is to say this machine makes as good a cup of coffee as you can get out of a drip machine. But the My Brew is cool because you can get into the settings to adjust things like the brew temperature to tweak your coffee down to perfection. A must for the nerdy but a setting you can happily ignore if you want coffee grounds in and great coffee out. If you like hot coffee, and you like a great cup of coffee in the morning then you can't ask for a better machine. 2. Runner Up - Cuisinart Stainless Steel Thermal Coffeemaker With 12 Cup Carafe Brew Style: Drip Alerts when it needs to be cleaned Coffee stays hot for 2 hours and drinkably warm for a few hours more than that Designed to make hotter coffee Can make 1-4 cups as well as up to 12 Permanent filter included Water filter included Price & Reviews Pros Effective thermal carafemakes strong coffee The carafe is very sturdy Cons Water reservoir could be easier to fill Pouring spout could be better This coffee maker brews at between 198 and 202 degrees which puts you right around the optimum coffee temperature and gives you a steaming hot cup of coffee. This goes into the thermal carafe which keeps the coffee piping hot for about 2 hours, and drinkably hot for about 4 hours. Not that we're here for warm coffee though right? This is a programmable coffee maker so you can set the time and have your coffee auto pour in the morning if you've loaded it with water and coffee grounds. Which I like doing I'll admit, there's something about waking up to coffee already being made that's just wonderful. The only real downside to this coffee maker is it's not got the best pouring spout. They've designed it so that you don't have to mess around with the lid of the carafe between brewing and pouring but it does tend to dribble a little down the sides. But at the lower price compared to the Moccamaster, it's not a huge trade-off. Finally, you've got a shower head to evenly disperse the water over the grounds for a more effective brew. Overall a great way to keep make and keep your coffee hot. The coffee isn't quite as good as made by the Moccamaster but it does a great job. 3. Budget Choice - BLACK+DECKER 12-Cup Thermal Coffeemaker Brew style: Drip Displays time since brewing Well insulated carafe Low brewing temperature Price & Reviews Pros Coffee stays hot for hours Timer is a useful feature Easy to clean carafe Small size Cons Again not the best pouring spout The brew light goes out before it's fully finished brewing Doesn't make the best coffee ever Can't reheat a thermal carafe The budget choice always comes with compromises. The main compromise of this machine being that it doesn't brew as hot as the other coffee makers on this list, it brews closer to 180 degrees which isn't quite hot enough for a superb cup of coffee but hot enough for a nice cup. That also means it's not as hot in the carafe but that's actually what I liked about this model. Although the coffee isn't as hot going in, the carafe is well insulated and it stays hot for a good couple hours. If you want a coffee that's as hot as possible then this isn't going to be the machine for you. You need a more expensive drip machine or a kettle and a French press (see below). But if you're on a tight budget and want a nice cup of coffee, that's kept as hot as it can be, the Black+Decker is going to be a great choice. Programmable, a 1-4 cup option, and it's got a 120-minute timer that tells you how long it's been since your coffee was brewed. Plus you can select whether or not you want a strong brew, and it's a good-sized 12 cup coffee maker, with 5 oz. as the cup size. 4. Best Insulated French Press - Mueller French Press Double Insulated 310 Stainless Steel Coffee Maker Brew Style: Immersion Triple-layered filter Requires a kettle Very well insulated Makes very hot coffee Price & Reviews Pros Solid construction Coffee stays piping hot Looks stylish Cons Not the easiest to clean Branding suggests german made but it's mad in china! If you've not used a French press before they are a little different than a drip, you need to use hot water from a kettle, pour it over the grounds (2 tablespoons per mug), and leave for 4 minutes. But the result is that you get superbly hot coffee and because this is an insulated French press it stays hot too. The longer you leave coffee the stronger it's going to get. So you want to drink it within about half an hour, but for that half-hour, you have very hot coffee so there is a trade-off. But, you also get much more control over your coffee, and with a little practice adjusting the grind size and brewing process you're going to be making coffee you never thought you'd be able to enjoy at home without a live-in barista. Mueller Austria has a superb press here and are one of the trusted names in coffee so you know you're getting a high-quality product. And as well as making excellent coffee you can use this to make tea too. A good choice for people who don't mind doing a little work to get a very delicious and very hot cup of coffee. 5. Best Pour Over Choice - Asobu Insulated Pour Over Coffee Maker (32 oz.) Brew Type: Pour Over Stays hot for several hours Needs preheated BPA Free large Capacity Leak Proof lid Price & Reviews Pros No paper filters Comfortable to hold Can make excellent coffee Cons More hands on than an automatic machine Doesn't stay hot for 12 hours as promised but will stay hot for several hours Insulated cups work excellent at keeping things hot, or cold. So if yours has been sat in a cupboard for an extended period it's likely going to be very cold. And that chill will cool down your coffee on first pour resulting in hot coffee for about an hour. This is why you need to pour hot water in it first, leave it for 30 seconds, then pour the water out and make coffee. I don't know if you'll get to the 12 hours as they claim but it will stay hot for several hours which is about as long as you want to still enjoy your fresh coffee. Again you will need a kettle to make this, maybe even a gosseneck kettle but it's worth it. You'll find a new range of flavors compared to a drip machine and find a new love of coffee. You can control brew strength, brewing time, and enjoy your cup of joe several hours later. The copper look is very stylish and the whole thing has a good quality feel to it. An excellent choice for coffee lovers who like their coffee hot and are interested in getting a coffee grinder to fine-tune their coffee and get the most from their coffee beans. Thermal Carafe vs Hot Plate Coffee Makers If you're looking to keep coffee hot these are your two best options. But which is better? There isn't much in it to be perfectly honest, both keep your coffee hot, but they do each have their own pros and cons so let's take a look. Pros and Cons of a Coffee Hot Plate Pros No temperature loss as your coffee gets held at that correct temperature You can see how many cups of coffee are left Can reheat even 10 cups of coffee on the hot plate Cons The consistent heat and slight evaporation happens changes the flavor of the coffee over time Glass carafes are more easily broken Uses more electricity A lot of people talk about coffee getting burned on the warming plate. This can't happen, the temperature isn't nearly hot enough for anything like burning to occur. And as for it getting "cooked", there isn't anything to cook into it because there aren't any grounds. Coffee does lose its freshness over time and while this happens slightly faster on a hot plate I think to say it's getting cooked is a little dramatic. I'll also say that while you can reheat coffee on a hot plate it doesn't taste as good. But do I do it? Yes, quite often when I forget about coffee and the 30-minute timer my current machine has run out, but it still tastes pretty good to me and I don't like wasting it. Pros and Cons of a Thermal Carafe Pros The coffee doesn't get "cooked" Uses zero power Usually made from tougher stainless steel I'll forget about it it's still kept your coffee warm rather than let it go cold. Cons No temperature control Can't see how many cups are left Often no way to tell how long the coffee has been in there Thermal carafe coffee makers aren't quite as popular, they hold the same amount of coffee, they're often dishwasher safe. But what I don't like is as soon as the coffee hits it, it starts cooling down. Slowly, of course, but once it's cooled there's nothing you can do. So a cup poured half an hour later will be colder than one poured fresh. The trade-off is it will taste much fresher because no other heat has been added and you've likely got a sealed lid. So it depends what you're after, if you want a truly hot coffee an hour later then you're going to want a hot plate, but if you want a fresh coffee an hour later then a carafe is the better choice. Your middle ground is a machine like the Moccamaster which can keep your brewed coffee at a very specific temperature 175 or 185 degrees which they've tested and is optimum for keeping coffee warm. But once the auto-shutoff activates on any hot plate very soon you're going to be left with cold coffee. Which you could always turn to iced coffee? There are a few different reasons why this might be the case, first, you might need to descale your coffee machine, especially if you live somewhere with hard water. Scale build-up can cause your heating element to get blocked and not heat the water as high as it can or should. Alternatively, it could be that you've gotten a cheap coffee maker, one that simply can't make a hot cup of coffee. Because an excellent drip machine makes coffee at 190-200 maybe even 205 degrees, but a cheap coffee maker will only make coffee at 170-180 degrees. So if you've gone too cheap it might just be that you need to upgrade your kit. What temperature do coffee makers brew at? Drip coffee machines brew anywhere from 170-205 degrees, good ones brew at around 200 degrees while cheap ones brew at 170 degrees which is just hot enough to get water out of the water reservoir and through the coffee grounds. Other Coffee Makers For Keeping Coffee Hot BUNN CSB3T Speed Brew Platinum Thermal Coffee Maker Brew Type: Drip Fast brews 10 cups in 4 minutes Double-walled insulated carafe Stays turned on at all times ready to go Price & Reviews This is a clever drip machine, you have to leave it on all the time because it's got two water tanks. One has the water already heated up and ready to go and the other you fill with cold water to replenish the hot tank once the pot is ready. The result of that is you have a full pot of coffee ready to go after just a 4 minutes brew time. And the coffee is nice and hot and stays that way in the carafe. An excellent coffee brewer if you're going to be making a lot of coffee, possibly in an office. The coffee stays hot for a couple of hours and the machine is instantly ready to go again, you just need to clean out the old grounds in the filter basket and put the new grounds in. It can make 20-50 oz brew sizes which aren't quite small enough for a single cup but is for a large travel flask. This is one of the first machines that doesn't have a brew-pause so you need to wait until the whole pot is made before you sneak a cup. But I've never thought they work very well despite being on all drip brew coffee makers. An excellent choice for large crowds of coffee drinkers who like hot coffee and want it kept hot. Breville BDC650BSS Grind Control Coffee Maker Brew Type: Grind and Drip Adjustable grind size Pre grounds mode Thermal Carafe 12 cup capacity Price & Reviews If you want to take your home coffee up a notch but don't want to deal with grinding your beans this is the way to go. Automatically grind your beans, brew your coffee, and enjoy a great coffee all without hassle. Plus you can keep your coffee hot for hours in the thermal carafe. A little more expensive than other drip machines on this list but with the built-in burr grinder it's still excellent value. You can use paper filters or a reusable filter in the brew basket. I wish there was more to say but there isn't, a superb choice of coffee maker for making great coffee and keeping it hot. Hamilton Beach (48465) Coffee Maker with 12 Cup Capacity & Internal Storage Coffee Pot Brew Type: Drip Coffee Internal coffee tank, no carafe Keeps coffee hot for 4 hours Programmable start timer Price & Reviews What you get with this coffee maker is a combo between a regular carafe drip machine and a coffee urn. Because the coffee brews internally in the machine and then gets dispensed with a button through a spigot straight into your cup. There's something I like about the coffee being stored inside the machine, I think because it's completely sealed so in my mind any steam will turn to condensation and fall back into the coffee, keeping all the flavor in. I could be completely wrong about that of course, but hey, it sounds good. 4 hours is a good long time to enjoy your coffee fresh, and if you're ok with it not being so fresh then you can set it for another 4 hours. An excellent coffee maker that keeps coffee hot for a long time. Wacaco Pimamoka Insulated Portable Single Serve Coffee Maker Brew Type: Portable Immersion Works similar to an Aeropress Makes coffee in 2 minutes Keeps coffee hot for 3-4 hours Completely portable Reusable Filter Price & Reviews This is the most unique coffee maker on the list, it works something similar to an Aeropress or a French press but it is certainly it's own being. The coffee is made by using pressure to pull water through the coffee grounds which results in a really tasty cup of coffee. Which in turn gets held inside the device and you just pop a lid on it and it's ready to go! Hot delicious coffee ready to go that stays warm for 3-4 hours, what's not to like? I will say that while the coffee brewing process takes 2 minutes, the setting up of the device is an easy 2-3 minutes on top of that. You've got a lot of different parts to organize and getting the grind size right can take a little time. But once you've got the hang of it it's completely worth it. Not to mention super nifty, as a piece of engineering I am completely fascinated I have to admit! A great portable way to have hot coffee on the go. Ninja Hot and Cold Brewed System Brew type: Drip Machine Makes tea and coffee Makes cold brew Hot and cold milk frother 6 brew sizes available 10 cup carafe size Price & Reviews I'll admit it's a strange one including a coffee maker that makes iced coffee as well as hot on a list of coffee makers for keeping coffee hot (say that 10 times faster). But I like to mix things up and have a good range of choice so everybody can find what they need. And this is an excellent drip machine, it's got a range of size options which is unusual, a reasonably sized 10 cup thermal carafe and the hot plate which can stay on for up to 4 hours. You can also make tea in it and there's even a separate filter specifically for tea that stops cross-contamination of your coffee. What is unusual is that it has a milk frother on it but doesn't make espresso, so it will make a cappuccino similar to the way you can make a sort of latte or a faux-ccino with a French press. What the milk frother is best used for in my opinion is for making velvety hot chocolates. Keeps your coffee hot, allows you to easily make cold brew, and iced coffee, and it makes a great coffee. Technivorm Moccamaster 59616 KBGBrew style: Drip 40 oz capacity Always brews at the perfect temperature Keeps coffee hot while not burning for 100 minutes SCA Certified Price & Reviews You want a hot coffee sure, but you also want an Above Average cup of coffee right? Of course you do! The Moccamaster is going to give you exactly that. I don't think you can buy a better drip-coffee machine, it always brews at 196-204 degrees which is the optimum coffee brewing temperature and the hot plate has two settings to keep it at 175-185 which is the ideal temperature for hot but not burning coffee. Some cheaper models have a hot plate that just keeps heating up coffee that then starts to "overcook" the flavors leaving you with a duller tasting coffee after an hour. Not with the Moccamaster, great-tasting coffee for the full 100-minute range of the hot plate. Yes it is more expensive but you are getting quality for the price, a five-year warranty comes as standard but people report buying one of these 10, 15 even 18 years ago and it's still working great by just replacing the odd part here and there. And as much as I love a budget Mr. Coffee machine you just can't beat the level of quality in a Moccamaster. That's why the Specialty Coffee Association has given it such great reviews and their seal of approval. I've shown the silver here but there is a wide range of colors available and there's something about the retro design of it that I just love. Brews it's full 10 cup/40 oz capacity in 6 minutes so you're not stuck waiting around and the coffee comes out piping hot and stays that way for 1 hour 40. The ideal choice of coffee maker for keeping coffee hot. So why is it at the bottom you ask? Well it's because it's almost always out of stock. I've heard of a microprocessor shortage is causing delays in the factory so, for now, it's at the bottom of the list destined to one day return. Final Thoughts I purposefully didn't include any K-cup machines in this list, nor did I include any espresso machines, they have their place but if you want long-lasting hot coffee they aren't what you need. Any questions or problems in this article just let me know in the comments below.
